- Acknowledge the change request and review the change Record to ensure required fields are filled out appropriately.

Project#1:

Project Name : Trading Account System(TAS)
Client : BOA
Organization : Sysnet Global Solutions
Role : Production Support Analyst
Environment : MQ, Oracle, ITRS, ITIL, NDM, UNIX, SQL, Linux, Kibana & Jenkins
Duration : 12th May 2022 to 10th May 2023

Description:

TAS is a FE version of existing regional communication server for a global bank. This is a middleware application and acts like a gateway between global customer front ending applications and backend product processors like **BOAFT**, etc. Using global front end, bank customer can initiate a payment transaction, these transactions are received by TAS. TAS applies various validation and re-formatting rules and routes the transactions to appropriate product processor and acknowledges the customer for the acceptance of the transaction. It support all the different types of payments like local transfers, cross border transfers, payroll payments, pension payments, high value payments, etc.

It has strong message rules processing engine which can deal with multiple input formats and has capability to re-format to the multiple formats.

Roles and Responsibility:

- Creating Roaster plan to the team. Monitoring and Analysis of the Front end Application, background code.
- Taking ownership of L2 customer issues and resolves them by analyzing/ root cause identification

- Follow SOP's (Standard Operating Procedure) & BAU activities to manage customer support functions.
 - Management and maintenance of these SOPs & BAU
 - Feedback management to both internal and external customers depending upon requirement
 - Ensure proper follow up and closure of issues
 - Keep abreast of the team's performance and ensure services are delivered in line with SLAs.
 - Ensure overall team load is balanced and cases are assigned to consultants based on capacity and skill sets
 - Engage with our internal and external customers to resolve customer issues
 - Engage with peers in product groups to resolve issues that span multiple products
 - Work closely with PS team, underlining the quality issues, sharing constructive customer feedback and suggesting ways for improvement.
-
- Manage escalations along with a fair and controlled backlog – understanding the reasons for backlog and suggesting ways to reduce it
 - Analyze functional and technical cases and provide a resolution in accordance with agreed customer metrics
 - Design and track productivity of team
 - Share knowledge and practical experiences on product/technical skills to continually improve the capability and effectiveness of the Services/Support teams
 - Mentor and coach the team to enhance their product knowledge and soft skills
 - Escalations of clients request and grievances to the higher levels to ensure maximum trust from the clients.
 - Supporting Volume testing to find out the application performance.
 - Interacting with clients from different countries to resolve the issues in PRODUCTION.
 - Monitoring the application in PROD server
 - Supporting and communicating with all related teams during Production Deployments.

- Perform change evaluation based on information received assessing quality of change for comprehensive plans, accuracy and lead times.
- Manage risk, change impact and urgency to ensure impact to production services is minimal and the reasons and justification for changes are business beneficial.
- Acknowledge the change request and review the change Record to ensure required fields are filled out appropriately.
- As a Production and Control support consultant was responsible for System monitoring and solving the customer queries.
- Responsible for providing Support in Level depending on the type of the issues and ensure to meet Client's SLA.
- Monitoring batch jobs in Autosys & TWS.
- Preparing the Status report for batch and analyzing DB for Report generation and distribution.
- Analyzing the transfer fault and manually uploading file to client site via FTP and deliver files through client Based tools.
